

## CONSULTING SERVICES

# WHO WE ARE

## MANAGED CYBER SECURITY SERVICES

CyberTrust 365 aims to be the IT Partner for managing all cyber security activities. Starting with an initial consulting phase, we design the right strategy and proceed to the actual implementation and management of processes to defend against cyber threats.

### WHO WE ARE?

CyberTrust 365 is the **business unit of SecureGate** specialized in developing **managed cybersecurity services**, with the goal of **protecting businesses through a proactive and tailored approach**.

This division offers comprehensive services including **24/7 monitoring, proactive defense, and in-depth threat analysis**, allowing companies to focus on their core activities without worrying about cybersecurity concerns.

### WHY CYBERTRUST 365

In today's digital landscape, cyber threats are becoming **increasingly sophisticated and frequent**.

SMEs can **face dozens to hundreds of attack attempts daily**, including phishing, malware, ransomware, and unauthorized access attempts, due to increasing attention from cybercriminals targeting these companies, which often **lack the internal resources and expertise** necessary for cybersecurity.

Therefore, a **proactive and integrated approach is required**, allowing timely detection of threats and anomalies in user and system behavior, and enabling an **immediate response to detected incidents**.

## CYBERTRUST 365 CONSULTING SERVICES

CyberTrust 365 offers consulting services such as Security Advisor, Vulnerability Assessment, and Penetration Testing, supporting client companies in determining their level of cyber risk and implementing mitigation and remediation strategies.

# SERVICES DESCRIPTION

## Security Audit

The **Security Audit** service of CyberTrust 365 aims to **assess a company's level of cybersecurity maturity**, in order to propose a roadmap for improving overall security in the fastest and most cost-effective way.

The service includes an **in-depth evaluation of an organization's information systems, policies, and procedures**, aimed at identifying vulnerabilities and ensuring alignment with best security practices.

Our audits are highly practical and help top management structure security activities and **allocate the appropriate budget**.

By combining automated tools with a manual review carried out by our team of experts, we provide a **360° view of the cybersecurity posture**, clearly delivering the necessary guidance to support informed decisions on the best security strategy to adopt.

# SERVICES DESCRIPTION

## Vulnerability Assessment

The Vulnerability Assessment is a crucial process for **identifying, analyzing, and mitigating vulnerabilities within IT infrastructures and web applications**, as well as assessing your exposure to risk.

We use a combination of advanced automated tools and manual analysis techniques to ensure a thorough understanding of attack surfaces and potential threats, helping companies continuously improve their cybersecurity.

- **Vulnerability detection:** the detection process covers both the company's external perimeter and internal networks, ensuring no vulnerable entry points are overlooked. External perimeter scans identify exposed services and possible entry points, while internal analyses check configuration security and identify risks associated with unauthorized access. We employ a continuous evaluation methodology that includes attack surface monitoring and network segmentation assessments to reduce risks.
- **Analysis:** a comprehensive vulnerability analysis focusing on both web applications and IT infrastructures, including servers, databases, and network devices. Our methods follow industry standards such as OWASP principles for web applications and NIST guidelines for vulnerability management. This approach enables us to identify not only known vulnerabilities but also unknown attack vectors through a hybrid approach of automated scanning and manual configuration checks.
- **Prioritization and remediation planning:** after identifying vulnerabilities, we assist clients in prioritizing remediation activities. We provide a detailed report that ranks vulnerabilities based on their severity and potential impact, using standards like the CVSS (Common Vulnerability Scoring System). Based on this data, we define targeted remediation plans, allowing clients to address the most critical vulnerabilities first.

Our data-driven approach, combined with constant collaboration with client teams, ensures that remediation efforts are aligned with business objectives and the company's context.

This service is offered on request, with pricing based on the number of IPs or applications to be scanned.

# SERVICES DESCRIPTION

## Penetration Test

The Penetration Testing service offered by CyberTrust 365 focuses on **simulating real attacks** with the aim of **identifying how existing vulnerabilities can be exploited** and assessing the potential impact they may have on the company's infrastructure.

Through a methodical and systematic approach, our experts perform active tests on web applications, IT systems, networks and devices, **simulating real cyber threats to test the resilience of the systems**, company processes, and the ability to detect and prevent attacks.

- **Real Attack Simulation:** we conduct targeted, realistic attacks to identify how vulnerabilities can be exploited and what the actual impacts on the company's infrastructure could be. These simulations provide a clear evaluation of critical vulnerabilities and potential entry points.
- **Active Testing:** our experts conduct active tests on web applications, IT systems, networks, and devices to emulate real threats and assess their resilience. This approach ensures a comprehensive analysis of the company's assets' security, allowing for quick identification of weak points.
- **Response Evaluation:** the evaluation of the company's response to penetration tests is essential for measuring the internal team's ability to recognize and effectively react to cyber threats. We identify areas for improvement and provide valuable feedback to enhance security procedures.
- **Certified Professionalism:** the service is delivered by certified professionals (OCSF and eCPPT), ensuring reliability and precision in identifying vulnerabilities. These certifications guarantee cutting-edge expertise in cybersecurity and the highest effectiveness in penetration testing activities.

The service is typically offered on demand, with the option of standard or customized packages.

- **Single Penetration Test:** a one-time intervention on a specific infrastructure or application. Pricing is based on the duration, complexity, and type of test (black-box, grey-box, white-box).
- **Periodic Penetration Test program:** recurring tests on a quarterly or annual basis, with follow-ups and continuous reporting. Monthly or quarterly billing is available for clients requiring recurring tests or across multiple assets over time.

# SERVICES DESCRIPTION

## THE ADVANTAGES OFFERED BY CYBERTRUST 365 CONSULTING SERVICES

CyberTrust 365 positions itself as a reliable and comprehensive partner, ensuring advanced and continuous protection. It supports companies not only in reacting to threats but also in proactively and strategically preventing them, while simultaneously reducing the costs and effort required to maintain a secure environment.

- **Access to expert and certified consultants:** CyberTrust 365 offers the expertise of highly qualified professionals who understand the specific challenges of cybersecurity. Thanks to recognized skills and certifications, the team can handle complex situations and provide effective, customized solutions.
- **Vulnerability assessment and prevention:** CyberTrust 365 provides Vulnerability Assessment and Penetration Testing services to proactively identify security gaps and critical points. These thorough evaluations strengthen the protection of company assets before they can be exploited by malicious actors.
- **Ongoing support and continuous improvement:** CyberTrust 365 adopts a continuous improvement approach, ensuring constant updates and alignment with the latest industry best practices. This allows clients to stay ahead of emerging threats and continually enhance their security posture.
- **Compliance support:** CyberTrust 365's consulting services help companies achieve and maintain compliance with industry regulations and standards. With detailed assessments and precise reporting, clients can ensure they meet legal requirements and reduce the risk of penalties.
